Chapter 1 Introduction	1
1.1 What is chromism and electrochromism?.....	1
1.1.1 Chromism.....	1
1.1.2 Electrochromism.....	3
1.2 Applications of electrochromic devices.....	4
1.3 Electrochromic devices (ECDs).....	5
1.3.1 Structure of electrochromic device.....	5
1.3.2 Transmissive ECDs and reflective ECDs.....	7
1.4 Electrochromic materials.....	8
1.4.1 Metal hexacyanoferrate complexes (MHCFs).....	8
1) Iron HCF.....	9
2) Nickel HCF.....	10
3) Zinc HCF.....	10
4) Copper HCF.....	11
5) MHCF Nanoparticles.....	11
1.4.2 Oxides.....	13
1) Tungsten oxide.....	14
2) Nickel oxide and hydroxide.....	15
3) Cobalt oxide and hydroxide.....	15
1.4.3 Organic compounds.....	17
1) Viologens.....	17
2) Polyaniline.....	18
3) Polypyrrole.....	18
4) Polythiophene.....	19
1.5 Purpose of this study.....	21
References.....	22
Chapter 2 Experimental Methods	27
2.1 Film deposition.....	27
2.1.1 Spin coating methods.....	27

2.1.2 Reactive RF magnetron sputtering.....	28
2.2. Particle size classification.....	30
2.3 Film thickness and surface and cross-sectional morphologies.....	31
2.3.1 Field emission scanning electron microscopy.....	31
2.3.2 Multi-beam interferometry.....	34
2.4 Plasma state.....	36
2.5 Crystal structure.....	37
2.6 Film density.....	38
2.7 Chemical bonding state.....	39
2.8 Particle size and colloidal stability.....	41
2.8.1 Dynamic light scattering.....	41
2.8.2 Zeta potential.....	43
2.9 Chemical composition.....	45
2.10 Electrochemical and electrochromic properties.....	46
2.10.1 Electrochemical measurements.....	46
1) Cyclic voltammetry.....	46
2) Chronocoulometry.....	48
3) Chronoamperometry.....	49
2.10.2 Electrochromic measurements.....	50
1) Coloration efficiency.....	50
2) Response time.....	51
References	52

Chapter 3 Improvement of the Electrochemical and Electrochromic Properties of Particle Size-Classified Zinc Hexacyanoferrate Nanoparticles (NPs) and Their Application to Electrochromic Devices..... 54

3.1 Introduction.....	54
3.2 Experimental procedures.....	55
3.2.1 Preparation of zinc and iron HCF thin films.....	55
3.2.2 Assembly of transmissive Fe-ZnHCF ECDs.....	58
3.2.3 Characterization methods.....	59
3.3 Characterization of ZnHCF-NPs and their thin films.....	60

3.3.1 Surface and cross-sectional morphology and particle size.....	60
3.3.2 Crystal structure.....	62
3.3.3 Electrochemical properties.....	63
3.3.4 Electrochromic properties.....	64
3.3.5 Durability.....	66
3.4 Electrochemical and electrochromic properties of Fe-ZnHCF ECDs.....	68
3.5 Summary.....	73
References	74
Chapter 4 Improvement of the Electrochemical Properties of Water-Dispersible Copper Hexacyanoferrate Nanoparticle Films by Cu²⁺ Injection	75
4.1 Introduction.....	75
4.2 Experimental procedures.....	76
4.2.1 Preparation of CuHCF-NPs and thin films.....	76
4.2.2 Characterization methods.....	79
4.3 Characterization of CuHCF-NPs and thin films.....	80
4.3.1 Crystal structure.....	80
4.3.2 Zeta potential.....	81
4.3.3 Surface and cross-sectional morphology.....	82
4.3.4 Chemical compositions.....	83
4.3.5 Electrochemical properties.....	84
4.3.6 Electrochromic properties.....	85
4.4 Summary.....	86
References	87
Chapter 5 Effects of Substrate Temperature on the Electrochromic Properties of Cobalt Oxide and Oxyhydroxide Thin Films Prepared by Reactive Sputtering Using O₂ and H₂O Gases.....	88
5.1 Introduction.....	88
5.2 Experimental procedures.....	89
5.2.1 Preparation method of Co oxide and oxyhydroxide thin films.....	89
5.2.2 Characterization methods.....	91
5.3 Characterization of cobalt oxide and oxyhydroxide thin films.....	92

5.3.1 Plasma emission spectra.....	92
5.3.2 Crystal structure.....	93
5.3.3 Chemical bonding state.....	94
5.3.4 Film density.....	95
5.3.5 Electrochemical and electrochromic properties.....	97
5.4 Summary.....	101
References	102
Chapter 6 Research Summary and Conclusion.....	104
6.1 Research summary.....	104
6.2 Conclusion.....	105
Achievements of This Research.....	106
Acknowledgments.....	109
